

Higher Yields

Faster Field Terminations

PANDUIT® OPTICAM® Pre-Polished Fiber Optic Connectors provide field terminations in less than half the time of field polish connectors and deliver yield rates approaching 100%.

- **Factory pre-polished fiber stub endface** eliminates inconsistent, time-consuming field polishing to reduce installation costs, labor, scrap and the number of tools required
- **Patented dual cam design** secures both the fiber and the buffer in one action and allows up to two re-terminations to ensure consistent termination results
- **Universal tool with integrated Visual Termination Indicator (VTI)** offers visual indication of proper termination for all OPTICAM® Connectors to virtually eliminate operator error; hand-held tool allows termination at the application

Together these features virtually eliminate operator error to deliver higher yield rates for lower installed costs. OPTICAM® Connectors are available in singlemode or multimode types, and in simplex or duplex variations, as part of the complete range of fiber optic connectivity solutions available from PANDUIT.
